

# Digital Payment Security Controls - Internal Playbook

DOC-017 | Version 2026.1 | Access: Restricted

## Purpose

This fictional playbook translates high-level digital-payment security themes into platform controls.

## Control catalogue

| ID     | Control                                          | Evidence                    | Owner             |
|--------|--------------------------------------------------|-----------------------------|-------------------|
| SEC-01 | Protect payment secrets from client-side storage | Application security report | AppSec            |
| SEC-02 | Use strong, non-deprecated crypto                | Configuration baseline      | Platform Security |
| SEC-03 | Centralize authentication for payment operations | Architecture review         | IAM               |
| SEC-04 | Maintain WAF/DDoS protection                     | Security dashboard          | Network Security  |
| SEC-05 | Test payment apps against security requirements  | Release sign-off            | AppSec            |

## Evidence handling

Preserve correlation IDs, timestamps, deployment version and authentication result. Do not copy credentials or payment secrets into incident records.

## Public reference context

The structure is informed by RBI digital-payment security controls covering governance, authentication, fraud risk, reconciliation and application security.
