

Payment and Account Error Code Reference

DOC-020 | Version 8.5 | Access: Operations

Error catalogue

Code	Component	Meaning	First action	Retry
TXN-1001	Account	Invalid account state	Check account status	After correction
TXN-1042	Beneficiary	Validation incomplete	Inspect beneficiary response	Conditional
TXN-2031	Ledger	Ledger unavailable	Check ledger health	Controlled
GW-3007	Gateway	External switch timeout	Check certainty	Policy only
ERR-GW-07	Gateway	Connection reset before definitive result	Use correlation ID + reconciliation	Not blindly
AUTH-401	IAM	Invalid/expired token	Reauthenticate	Yes
AUTH-403	IAM	Scope denied	Check caller scope	No until fixed
REC-5002	Reconciliation	Settlement mismatch	Run exception workflow	Controlled

Common confusion

TXN-1042 concerns beneficiary validation. GW-3007 is an external timeout. ERR-GW-07 is a transport/result-certainty issue and must not be treated automatically as terminal failure.

Search tips

Search exact error code first, then transaction ID, correlation ID, then human-readable symptom.
